DETAILED ACTION

Allowable Subject Matter

1. Claims 1-18 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claims 1-9, the prior art alone or in combination does not teach the limitations of a laminated capacitor comprising a number of first and second external terminal electrodes disposed on a side surfaces is larger than a number of first and second external electrodes disposed on an end surfaces, and an end surface pitch which defines an interval between adjacent first and second external terminal electrodes disposed on the end surface is equal to or less than about 0.9 times of a side surface pitch which defines an interval between adjacent first and second external terminal electrodes disposed on the side surfaces.

With respect to claims 10-18, the prior art alone or in combination does not teach the limitations of a laminated capacitor comprising a number of first and second external terminal electrodes disposed on a side surfaces is larger than a number of first and second external electrodes disposed on an end surfaces, and an end surface pitch which defines an interval between adjacent first and second lead electrodes electrically connected to the first and the second external terminal electrodes disposed on the end surfaces is equal to or less than about 0.9 times of a side surface pitch which defines an interval between adjacent first and second lead electrodes electrically connected to the first and second external electrodes disposed on the side surfaces.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation Relevant of Prior Art

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - a. Kuroda et al. disclose monolithic capacitor, which can reduce equivalent series inductance.
 - b. Nogi discloses multi-layer LC complex component.
 - c. Yamate et al. disclose multi-layer feedthrough capacitor.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nguyen T Ha whose telephone number is 571-272-1974. The examiner can normally be reached on Monday-Friday from 8:30AM to 6:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dean Reichard can be reached on 571-272-2800 ext. 31. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
